Installation

Pre-Installation

The DS-6700 Series Audio/Video Encoder is a highly advanced surveillance equipment that should be installed with care. Please take into consideration the following precautionary steps before installation of the Encoder.

1. Keep all liquids away from the Encoder.
2. Install the Encoder in a well-ventilated and dust-free area.
3. Ensure environmental conditions meet factory specifications.
4. Install a manufacturer recommended HDD (for DS-6700HWI / HFI-SATA).

Installation

During the installation of the Encoder:

1. Use brackets for rack mounting.
2. Ensure there is ample room for audio and video cables.
3. When installing cables, ensure that the bend radius of the cables are no less than five times than its diameter.
4. Connect both the alarm and RS-485 cable.
5. Allow at least 2cm (≈0.75in) of space between racks mounted devices.
6. Ensure the Encoder is grounded.
7. Environmental temperature should be within the range of -10 °C ~ 55 °C, 14 °F ~ 131 °F.
8. Environmental humidity should be within the range of 10% ~ 90%.

Hard Disk Installation

This section is applicable to DS-6700HWI/HFI-SATA models only which can be installed with HDD for recording.

Prior to Installation

The device is factory installed with no hard disk. Refer to the following instructions to install the hard disk according to the total capacity calculated in terms of the *Schedule Recording Settings*. The installation and removal of the hard disk should be operated by qualified professionals.

Before installing a hard disk drive (HDD) for DS-6700HWI / HFI-SATA, please make sure the power is disconnected from the device. A factory recommended HDD should be used for this installation.

Tools Required: Screwdriver.

Steps:

1. Use the screwdriver to unfasten the screws on both sides and rear panel of the device, and then remove the cover from the chassis.

2. Place the HDD into the slot of the chassis and then secure it in position by fastening the screws at the bottom of the chassis.

3. Take out the HDD data line from the accessories box. Plug one end of the data line to the circuit board and the other end to the data line port of HDD. Connect the power cord to HDD in the same way.

4. Replace the cover and then tighten the screws on both sides and rear panel of the device.

Configuring Network Parameters

Purpose:

If you don't know the IP address of the decoder and this is not the first time you use the decoder, you can use SADP (IP finder) software or the Serial port tools to find out the IP address of the decoder and to configure the IP address or other network parameters of it. It is recommended to change the default IP address for the first time to use it.

This chapter aims to tell the procedures of using the SADP software to find and configure the IP address and other parameters of the device.

Note:

For the first-time user, the default user name of DS-6700 is *admin*, and password is *12345*. And the default IP address is 192.0.0.64.

Searching Online Devices

● Searching online devices automatically

Click  to run the SADP software and it will automatically search the online devices every 15 seconds from the subnet where your computer locates. It displays the total number and information of the searched devices in the **Online Devices** interface. Device information including the device type, IP address, port number, gateway, etc. will be displayed.

Note: Device can be searched and displayed in the list in 15 seconds after it goes online; it will be removed from the list in 45 seconds after it goes offline.

● Searching online devices manually

You can also click  **Refresh** to refresh the online device list manually. The newly searched devices will be added to the list.

Note: You can click  or  on each column heading to order the information; you can click  to expand the device table and hide the network parameter panel on the right side, or click  to show the network parameter panel.

Modifying Network Parameters

Steps:

1. Select the device to be modified in the device list and the network parameters of the device will be displayed in the **Modify Network Parameters** panel on the right side.
2. Edit the modifiable network parameters, e.g., IP address, port number and gateway.
3. Enter the password of the admin account of the device in the **Password** field and click  **Save** to save the changes.

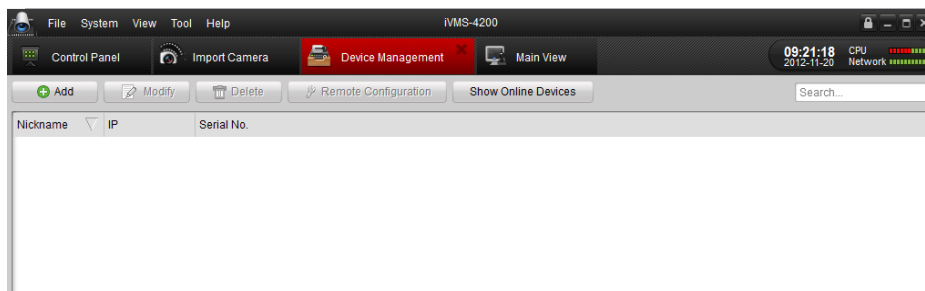

Access to DS-6700 by Client Software
